Purpose

The purpose is to define the procedure for the handling of a Service Call. This procedure will outline the tasks, actions, and responsibilities necessary for an FE to perform a Service Call.

Scope

This procedure applies to all OBS Service Calls. This procedure affects OBS Field Operations, Customer Care Center, Technical Support, and 1P warehouse.

Definitions

Call Avoidance is a method of troubleshooting over the phone by a Field Engineer to resolve a problem before going to the customer's site.

CCC is a Customer Care Coordinator.

Customer Time represents the actual time within the customer.

ETA is the **Estimated Time of Arrival**

FE is a Field Engineer

FE Response Time is the elapsed time from when an FE is dispatched by the Customer Care Center representative until the first debriefed arrival date and time reported.

FOS is the Field Operations supervisor. This is the supervisor responsible for the customer account:

FOM is the Field Operations Manager. This is the manager responsible for the customer account.

Incomplete Call – A service call that has not been finished due to the need for procuring of a part, waiting for a part, or leaving the site for any reason. The Customer Care Center is notified in all cases.

FSR is the service report used by FEs to debrief service activity.

Total Resolution Time is the elapsed time from a Customer reporting a problem and requesting service through the Care Center until the FE closes the service call.

Service Call is a Service Request and may be generated by:

Customer, On-site Field Engineer, Onsite Operator

a customer contacting the care center where a CCC creates a Service Request

a Field Engineer is contacted by CCC representative to create a Service Request

Responsibility

Customer Care Center

- Dispatching FEs
- Opening and tracking service calls

Field Operations

- Contacting customer about service issue
- Monitor machine over Snapshot
- Going to the customer's site, if necessary, to make the repair on the equipment
- Send FSR to customer care center to close the service call
- Completing all necessary debrief tasks associated with normal call reporting

Technical Support

- Providing information and assistance to the FE whenever possible by phone, email, or on site

1P warehouse

- Providing parts or emergency parts to the FE.
- Providing parts status, and shipping information to the FE.

Procedure

The procedure begins when an FE is contacted by a Customer Care Center representative by telephone, e mail

Once the FE accepts the call, the following things occur:

The FE is given the following information:

- Company name
- Company Address
- Phone number
- Time the call was received
- Service Request Number
- Call Type
- Billable or non-billable
- Customer contact person
- Reported Problem

The FE is now assigned to the Service Call with status of "Accepted".

- The FE Response Time clock begins running in S21.
- The FE contacts the customer.
- The FE tries to resolve the problem over the phone.

If the problem is resolved over the phone,

This is Call Avoidance.

The FE must debrief his phone support time in S21

If the problem is not resolved through Call Avoidance,

The FE informs the customer of the ETA.

If the ETA is 1 hour or more beyond the contractual response time, the Field Engineer should notify the Field Operations Supervisor

- The FE arrives on site:
- The FE notes the arrival time
- This information must be correctly debriefed later.
- This information is used by the system to calculate the Response Time
- The FE performs normal troubleshooting and repair activity.
- If the problem is successfully resolved prior to his departure from the customer site,
- The FE notes the departure time.

The FE informs the customer care that the call is complete and he is available

The FE starts the Call Closing Procedure.

If a part is required that is not in car stock or at the customer site,

This is an Incomplete Call.

The FE informs the customer of the ETA of the part and the plan of action.

The FE informs the Customer Care the call is Incomplete and of his available status.

The FE begins the Rescheduling Work – Awaiting Parts Procedure.

If parts are required to repair a **down** machine,

This is an **Incomplete Call**.

The FE updates the supervisor who is responsible for the account with the status of the service call.

The service call will remain **Incomplete** in the S21 until the part is received and installed to bring the system to its fully operational condition.

When the part is received at the site or from another location,

The FE completes the necessary repairs and completes the service call.

The FE begins the Call Closing Procedure.

Used part has to be returned

The FE fills out the necessary paperwork following the **Return Parts** Procedure.

The FE returns the part to the Logistics Department at the earliest convenience

If the need arises for technical assistance,

The FE contacts **Technical Support**.

The Technical Support Request Procedure would be started.

Technical Support supplies the information requested.

If the problem is resolved,

The FE notes the departure time.

This information must be correctly debriefed

The FE informs the customer care that the call is complete and he is available

The FE starts the Call Closing Procedure.

If the problem is **not** resolved within 2 hours or if the problem has been diagnosed as severe or of a critical nature, the **Call Escalation** Procedure is started.

If the FE using all the resources available, resolves the problem,

The FE informs the Call Center, the Supervisor, and the Customer **to end the escalation**.

The FE starts the Call Closing Procedure.
