SERVICE REPORT PROCESS

1.- When the client reports any damaged or stopped equipment, he must have the following information:

- Equipment serial number
- Contact name
- Phone
- Confirm the address and place or department, where the equipment is located
- Equipment failure
- Hours of service

2.- Once the above data has been confirmed, the Customer Care Center department will notify the client of the report number for follow-up.

3.- When customer data is registered in the system, Customer Care Center must notify the field technician immediately.

4.- The response time of the technician of the division of DPS, PPS, LFS / WF should not be greater than 2 hours average during the hours of service and since the client receives the report number or the agreed in service contract.

5.- The response time of the technician of the division of office equipment should not be greater than 4 hours average during the hours of service and since the client receives the report number or the agreed upon service contract.

6.- The technician, as soon as he receives the notification call of a report, must make a telephone call to the client to try to solve the problem remotely, otherwise he will have to attend the client's home to repair the reported equipment.

7.- The repair time will depend on the type of issue and the availability of spare parts. On average, the following response and solution times will be handled for the DPS, PPS, LFS / WF equipment

Issue Level	Description	Response time (Working hours)	Solution time (Working hours)
Severity 0	The equipment is totally disabled or down to operate it. Customer cannot use the machine to run production	2 hrs	8 hrs
Severity 1	The equipment presents problems, but allows the client to continue with its operation even in degraded form. It has intermittent/randomly issues	4 hrs	16 hrs
Severity 2	The equipment has a few issues, but it does not affect the operation of the machine, it includes some user queries, documentation error, insignificant error displayed in the panel. Machine works, but it needs to optimize	8 hrs	32 hrs

BISG EQUIPMENT INSTALLATION PROCESS

1.- Once a new device is delivered with a client, a call must be generated from System 21 (S21) to schedule the visit of a Service Engineer to install the equipment.

2.- The print site at client's facilities must have the electrical and space requirements, as well as the air conditioning or heat extractors. Direct service assigned to a Service Engineer contemplating that he must have the profile to install the requested equipment, as well as the data specified in Site Survey or Service Guide of the above machine.
They must provide you with the following information:

- Report number,
- Series
- Model
- Contact
- Phone
- Home
- Installation Data (Equipment configuration)

3.- The engineer will assist to install the machine and at the end of the installation of the equipment. Once the installation is completed, the customer must accept the installation by signing the FSR document (Field Service Report).

4.- Afterwards, the engineer will send to Customer Care Center the installation completion FSR signed by the client.

5.- Customer Care Center must make the capture of this data in S21 to conclude the process

6.- For multifunctional equipment, a state acronym will be placed in which the equipment is left

CLI= Pending to be installed as a result of the facilities or situation of the Client

CAN= Pending to be installed as a result of Canon Mexicana as: (lack of accessories, software or notification of plugs or regulator that the customer needs for said installation)

FIN= Installation has been completed successfully

RESPONSIBILITIES

The customer must report the equipment issue by telephone to the Service Department and Customer Care Center(CCC) of Canon Mexicana, S. De R. L. De C. V.

In case the client requires following up on the status of the report, a report number must be provided to the Customer Care Center agent. The case number is mandatory in order to attend to the clients.

The service engineer must manage its spare parts inventory correctly and accurately. In case you require an additional spare or not included in your stock you must request it to the warehouse 1P or WP or CMEX WH
If you do not have the spare part, you must send a spare part backorder and it is necessary to generate the confirmation number of the spare part back order.

The engineer must have 0 differences in all the inventories requested by Service Administration and the Accounting Area.

The engineer must deliver all used parts that replace the equipment of policy or income

When the service engineer does not have any spare parts to repair the equipment, he should inform this immediately to its supervisor of the actual situation. In case service engineer does not have spare parts available due to lack of CMEX spare parts inventory, service engineer can leave the case as pending, otherwise it is necessary to correct the fault/issue or defect completely

The service engineer, the supervisor, the Customer Care Center and the service administration should follow up on the spare parts requested by the engineers in order to reduce the repair times.

When the service engineer completes the report, it must contain: machine serial number, current machine counter report, code of activities performed, repair comments and used spare part for this case

Customer Care Center based on planning in S21, must assign preventive maintenance, assigning each engineer with at least one day before

Supervisors must perform the strategic planning of their assigned equipment population.

Service engineers are responsible for preventive maintenance, focused on production equipment and color.

Canon

Report

The service report must be completed by the service engineer and the client must sign the report as service acceptance.

Service engineer must provide a physical copy of the report to the client so that he or she is aware of the work done.

Service engineer must provide the original report to the supervisor in order to check that the FSR data matches S21
