TITLE: **TRAINING**					
	VALIDITY BEGIN			VERSION	
REF: HEALTHCARE-016/18	DAY	MONTH	YEAR		PAGE 1 OF 4
	31	05	2018	**1 .0**	

I. OBJECTIVE

Establish the guidelines to follow in the design, development and implementation of training courses for the Canon Mexicana Healthcare product line.

II. SCOPE

This policy will be applicable to the employees of Canon Mexicana.

III. RESPONSIBILITIES

The Healthcare service department in order to ensure the quality, effectiveness and efficiency of the training provided to its customers, distributors and Healthcare area personnel, will follow the following points as a procedure.

The Healthcare are includes two divisions, radiology and ophthalmology. The Service Engineer and Supervisor will be responsible for provide the appropriate training as well as for drawing up the technical development plans accordingly to the radiology and ophthalmology lines.

Canon Mexicana employees must refer any training request regarding Healthcare devices to the Healthcare Service department.

IV. PROCEDURE

1) Training applies for two product lines. The policies described in this document apply to both lines.
   a. Ophthalmology
   b. Radiology

2) Within these product lines, a distinction must be made between two different types of training.

PREPARED BY:	REVIEWED BY:	APPROVED BY:
DANIEL PEREZ HEALTHCARE SOLUTIONS SALES AND SUPPORT ENGINEER DATE: 31/05/2018	FEDERICO TAFOYA HEALTHCARE SOLUTIONS SALES AND SUPPORT MANAGER DATE: 31/05/2018	MORIHIRO ETO SALES ADMINISTRATION BISG DIRECTOR DATE: 31/05/2018

a. Service training for technical staff.
b. Technical, clinical and commercial training for sales staff.

3) Service training for technical staff.
Due to the technology complexity and in order to ensure service quality, this training must be provided following the current training program and adapting it to the type and knowledge level of the personnel to be taught. In general, this program should include the following aspects for software and hardware:
   a. Physical principles related to the device measurement method
   b. Physical principle of operation
   c. Technical specifications
   d. Operation and part description
   e. Installation and start up
   f. Tools and operation modes
   g. Configurations.
   h. Preventive and corrective service procedures
   i. Error identification, warnings and first aid support

4) Technical, clinical and commercial training for sales staff
This type of training should be focused on highlighting the technological qualities and competitive advantages of the Healthcare devices, adapting it to the type and knowledge level of the personnel that will be taught. It is necessary to include clinical application themes, which provide tools in order to understand, identify and solve the specific needs of the medical personnel. The following themes must be included for Hardware and Software:
   a. Anatomy, physiology and common pathologies.
   b. Technical features
   c. Tools and operation modes
   d. Configurations
   e. Installation, start up, operation and demonstrations.
   f. Competition analysis
   g. Bibliography

5) The trainings can be carried out at the Canon Mexicana facilities or at the customer or distributor ones. The following aspects should be included:
   a. For service training to technical personnel it is recommended to have a maximum attendance of two participants.

b. For technical, clinical and commercial training for sales personnel it is recommended to have maximum attendance of five participants per device.
c. The training support material must be provided to each one of the participants.
d. For training development it is recommended to use the information learned at the Canon Mexicana trainer development program offered by the Human Resources Department.
e. In order to provide written attendance evidence for the training course, it will be enough to comply with 100% attendance.
f. In order to provide a certificate related to technical service training, in addition to comply with 100% attendance to the course, the participant must approve the appropriate evaluation (theoretical and practical) obtaining a grade greater than 85%. The certificate must include the participant name and Institution, course date, product line, model and version involved as well as certification number.

6) Training evaluations are intended to determine the acquired knowledge level from each one of the participants. In general, the following aspects should be covered
    a. Service training for technical staff will be evaluated in the following aspects.
        i. Practical skills
        ii. Technical knowledge skills
    b. The Healthcare Service Supervisor, altogether with the designer of the training course, will determine the weighting percentage for each one of the aspects above, being advisable to provide greater weight to the practical aspect.
    c. The technical, clinical and commercial training for sales staff will be evaluated in the following aspects.
        i. Anatomy, physiology and common pathologies
        ii. Technical features
        iii. Clinical applications
        iv. Installation, start-up, operation and demonstration skills.
    d. The Healthcare Service Supervisor, together with the designer of the training course, will determine the weighting percentage for each one of the above aspects. An equitable balance is recommended.

7) Once the training is completed, a satisfaction survey will be applied to the participants and will be registered in the Lotus Notes BISG HC Service Training database.

8) Generally, the first training does not consider additional charges to the customer or dealer. However, in the event that a participant requires having an already provided training course, a fee will apply. The appropriate quotation must be authorized by the Service Supervisor and the Healthcare Manager.
